About Us

Founded in 1997, WNS Network Services is a leading provider of innovative and reliable business IT infrastructures that meet the voice and data requirements of organisations of every size across the UK and Europe. We understand the critical role that efficient structured cabling systems play in every successful organisation and strive to exceed customer expectations for every deployment.

Our clients include many well-known organisations in many different markets including:

- Financial
- Manufacturing
- Retail
- Government
- Utilities
- Health
- Technology
- Education
- Residential

We have a proven track record of installing reliable, high speed IT infrastructures in mission critical environments on time and within budget. What is more, we can ensure that networks have the required level of resilience to enable organisations to comply with the latest corporate governance guidelines.

An Expert Resource

WNS Network Services has offices in London, Middlesex, Somerset and Wales, with engineers strategically located nationwide. This enables us to provide a fully managed national service on a local basis whilst consistently delivering the highest quality standards of work.

An experienced project team is assigned to every deployment with responsibility for organising all resources and liaising with clients, keeping them fully informed of progress from start to finish and ensuring that target milestones are met.

Our engineers undertake regular training programmes, conducted by the leading manufacturers, to maintain their knowledge and skills.

Services

WNS Network Services provides a comprehensive range of tailored IT infrastructure services such as:

- Complete Structured Cabling deployments across single or multiple sites
- Equipment moves and configuration changes (Moves Adds & Changes)
- Complete project rollouts
- Infrastructure Health Checks
- IP Solutions / CCTV
- Audio Visual / Interactive Solutions
- Overseas Projects

Our system design expertise ensures that networks are future-protected, enabling emerging technologies and bandwidth intensive applications such as video and multimedia to be easily integrated.

Using the latest test equipment our engineers can ensure the operational status of every system and results can be electronically provided to clients upon completion of projects. WNS Network Services ensures that all installations are fully compliant with the latest industry standards.

Structured Cabling

WNS Network Services only partners with best of breed suppliers with proven track records of performance and durability. We hold key accreditations with TE Connectivity (ADC Krone), Brand Rex, Excel, Connectix, Siemon and Amp Netconnect. Through our approved partner companies, we can offer Ortronics, Systemax, Molex, Panduit and R&M.

This allows us to provide high performance voice and data network infrastructures to meet the requirements of all budgets, utilising a variety of technologies including high performance structured cabling systems. We offer a comprehensive warranty of up to twenty-five years on such systems. WNS Network Services also specialises in fibre optic deployments including OM1, OM2, OM3 and OM4 multimode cables, and long haul OS1 & OS2 single mode cables along with all termination types.

Moves, Adds & Changes

WNS Network Services provides a comprehensive support service and respond rapidly to all requests for assistance with office relocations, personnel moves or equipment changes.

An experienced relocation team is assigned to ensure that all aspects of the move are identified. A detailed project plan is prepared to ensure that all the required services are in place, including all necessary voice and data outlets, prior to the desk move. This is usually completed outside normal office hours.

- Pre-project planning and identification of required services
- Co-ordination of all associated services
- Installation or re-location of any new information outlets if required
- Patching of new positions and provision of desk connections
- Re-location of equipment (PC's, printers, faxes etc)
- Post on site attendance/support for peace of mind
- Provide detailed documentation

Wireless Solutions

To meet the increasing need for mobility, WNS Network Services provides a range of scalable wireless solutions, either stand-alone or integrated with conventional wired networks, with all the security features required to prevent unauthorised access.

Using the latest industry standards for wireless infrastructures, sufficient speeds can be achieved enabling all standard commercial applications such as file sharing, printer sharing, email and Voice over IP (VOIP) to be deployed.

WNS Network Services has the expertise to quickly and cost-effectively deploy wireless networks complete with all necessary access points and integrate them with existing wired networks without disruption to the working environment.

Working Overseas

WNS Network Services has vast experience in deploying teams of engineers to work abroad delivering structured cabling installation projects; we can ensure your installation is delivered on time and within budget to the highest quality standards. This service offers clients peace of mind that their structured cabling installations run as smoothly as they would in the UK.

Infrastructure Health Check

WNS Network Services offers a comprehensive health check service for existing IT infrastructures. After checking the operational status of all voice and data cabling, we provide a full report detailing the status of your infrastructure. It identifies areas of your existing network infrastructure that are not meeting current demands and recommends suitable solutions that will improve performance and allow for future expansion.

We can offer you a free quotation for the health check and following our report on the status of your network infrastructure, we can provide a quotation for any network or cabling improvements that may be required.

IP Solutions / CCTV

WNS Network Services is able to provide security and access control solutions using internet protocol technology. CCTV cameras and door control hardware can be wired and controlled using your new or existing structured cabling network. WNS can supply hardware and software combinations to cater for the small office through to multi-site applications. Existing analogue cameras can even be integrated into your new LAN cabling installation to eliminate the need for a large capital outlay on new IP cameras.

Audio Visual / Interactive Solutions

WNS Network Services are specialists in the design, installation, and implementation of audio visual and interactive solutions. Whether you require an audio distribution system, digital signage solution, complete video conferencing system, projector or interactive whiteboards, WNS can provide you with an individually tailored solution to suit your requirements.

- Audio distribution System
- Video conferencing system
- Interactive whiteboards
- Projectors
- Video Walls

Site Support Resource Service

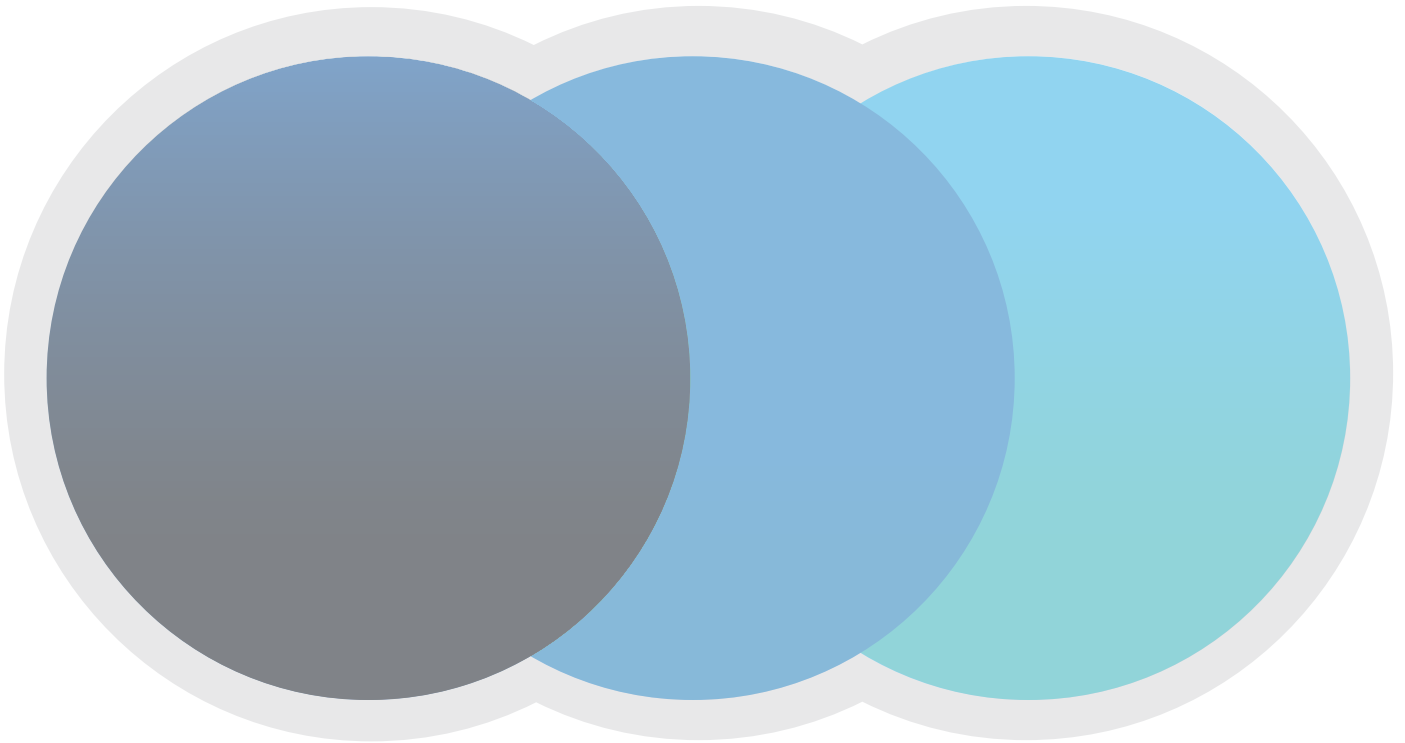

WNS Network Services engineers and site Management staff can be deployed on a flexible daily, weekly or longer term basis to suit customer resource requirements.

- Project Managers
- MAC engineers
- Structured cabling support engineers
- Patching engineers
- Fibre Optic engineers

Health and Safety

WNS Network Services has a corporate Health & Safety document that is available upon request. We will also work to client health and safety regimes when required. WNS has never had any reportable incidents or claims.
